**KNICK EXPLORATION PREPARES FOR SPRING DRILLING
ON ITS EAST-WEST GOLD PROPERTY**

Val-d'Or, Quebec, February 27, 2009 – Knick Exploration Inc. (TSX-V: KNX) (“Knick Exploration” or “the Company”) wishes to announced that all its historical drill data, which represents more than 180 drill holes, has been processed into Geotic Software under the supervision of Donald Theberge, Eng., MBA., in preparation for a drilling program planned for Spring 2009.

Data compilation is presently underway and will generate several section and maps that will allow the Company to identify several new drill targets and maximize its chances of success. A first 3D model will be available in the coming weeks.

The East-West property is located on strike with Niogold’s Marban property and the Wesdome Kiena gold mine, which hosts two gold-bearing zones, the East and West zones. Past drilling on the property returned two interesting assay results: 2.11 oz gold over 10.5 feet (CD-55) and 2.32 oz gold over 13 feet (CD-78) (Source: 43-101 report by D. Theberge, Eng. MBA.). The property remains virtually untested below the 600-foot level, with almost all the drill results between surface and a depth of 600 feet.

“We feel that the property has strong potential at the 600-foot level and deeper,” said Jacques Brunelle, President and Chief Executive Officer of Knick Exploration. “We are looking forward to starting drilling this spring, which will be a defining moment for the Company and its investors.”

The Company intends to update its investors on a monthly basis.

About Knick Exploration:

Located directly along the east-west gold strike that hosts Agnico-Eagle's Goldex Mine, Wesdome's Kiena Gold Mine and the Marban past producer, Knick Exploration seeks to discover a new gold deposit in one of Canada's most active mining regions, the Abitibi Gold District.

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this release.
