

PRESS RELEASE

For immediate release

**KNICK EXPLORATION FIELD-READY FOR
DRILLING ON ITS EAST-WEST GOLD PROPERTY**

Val-d'Or, Quebec, July 07, 2009 – Knick Exploration Inc. (TSX-V: KNX) (“Knick Exploration” or “the Company”) is pleased to announce that it has completed geophysical surveys on its wholly-owned East-West property, located in the Val-d'Or mining camp, along strike from and between the active Kiena mine (Wesdome Mining Ltd., TSX–WDO) and the old Marban mine (Niogold Mining Corp., TSX.V-NOX).

The geophysical surveys were conducted in preparation for drilling. Induced-polarization surveying, detailed total-field magnetic surveying and VLF electromagnetic surveying was carried out during the month of June 2009 on a grid of 22 km of lines cut on the property. The survey data is currently being processed for drill target selection.

Knick Exploration is focusing its exploration efforts on the East-West property, its flagship project, where \$1.1 million has been allocated for exploration in 2009. The Company will be drilling to test the known gold zones and their extensions along strike and at depth.

“Most of the historical drilling is in shallow holes, generally less than 200 metres deep,” said Jacques Brunelle, President and Chief Executive Officer of Knick Exploration. “We are very excited about the property’s “blue sky” potential at mid-depth plus, which is one of the targets of this year’s program. We should begin generating drill results in the third quarter of this year, and will release them as they come in.”

Gordon N. Henriksen, P.Geo., Vice President of Knick Exploration, is the Company’s qualified person as defined by National Instrument 43-101. He has reviewed and approved the contents of this press release.

We seek Safe Harbour.
