

**KNICK EXPLORATION
COMPLETES PHASE I
DRILLING AT TRECESSON**

Val-d'Or, Quebec, June 30, 2011 – Knick Exploration Inc. (TSX-V: KNX) (“Knick Exploration” or “the Company”) is pleased to announce that it has **completed the Phase I Drilling** on the Trecesson Property. **One hundred and twenty one holes** totalling **3,433m** (11,263ft) were drilled.

Visible gold has been observed in **core** from **25 holes** to date. **Logging and sampling is ongoing.**

Knick will release the programs **results** upon receipt of the **final analysis**, anticipated in August.

Reference NI 43-101, Trecesson Property, Abitibi Area, **Amos Region**, April 30, 2010 by Donald Theberge, Eng., M.B.A.

Samples are being sent to Expert Laboratory in Rouyn-Noranda, Quebec for analysis. **Fire assay** and **metallic sieve** methods are being implemented for analysis as deemed **warranted.**

Due to the nature of the **native gold mineralization** occurring on the **Trecesson Property**, **Metallic Sieve** gold analysis is being performed on all quartz veining to minimize “nugget effect” results and more accurately assess gold grades.
