PRESS RELEASE

For immediate release

**TRECESSON PROPERTY
WINTER-SPRING STUDIES
DETERMINE EXPLORATION TARGETS**

Val-d'Or, Quebec, June 12, 2012 – Knick Exploration Inc. (TSX-V: KNX) is pleased to report that the **ongoing compilation and research** on its **Trecesson Property** has targeted **9 areas of quartz veining within the Trecesson Pluton and 11 areas of base metal potential** as 8 historic pyrite, pyrrhotite, chalcopyrite ± sphalerite, 2 pyrite, pyrrhotite and 1 pyrrhotite occurrences **within the volcanics**, to be investigated. Near the margin of the pluton **one of the areas of veining** is reported to carry **tungsten mineralization-scheelite**. From previous **induced polarization data 12 geophysical anomalies in part lie within areas of rock outcroppings** and have also been **targeted for field mapping/prospecting and sampling**.

Priority areas include:

- i) A **+500m quartz vein** in the **south west** portion of the **pluton, 2.2km southwest** of the **Cossette gold system** (MRNFQ DP 199 & RG 194-1973-79).
- ii) A **+185m quartz vein** proximal to the **southern margin** of the **pluton, 2.8 km south southeast** of the **Cossette gold system**. (MRNFQ DP 199 & RG 194-1973-79)
- iii) Approximately **2km** to the **east** of the **Cossette Gold System** a **+27 m quartz vein** (1937 **Kongor Mining-GM 08067**).
- iv) A **457m quartz vein** to the **south east** of the **Spirit Lake Area** and **2.5 km east** of the **Cossette gold system** (1937 **Kongor Mining-GM 08067**).
- v) The **quartz vein-tungsten area** in the **northeast part** of the property.(2003 C. Derosier-GM 61308, MRNFQ RG 109-1964)

Previously reported surface grab samples highlights from two areas of veining investigated in 2011 included:

1) **109.82g/t gold** (metallic sieve), 61.6 g/t silver, 1.41% copper, 9.39% zinc and 0.79% lead, Cossette Vein system (Press release Feb. 12, 2010)

2) **18.21g/t gold**, Spirit Lake Area (Press release Dec. 8, 2011)

Previously reported (Press release Aug. 16, 2011) **drilling highlights included:**

- 1) TR-11-61, **14.22g/t gold over 3.80m** (0.415oz/ton over 12.46ft),
- 2) TR-11-73, **22.69g/t gold over 1.95m** (0.663oz/ton over 6.4 ft)

- 3) TR-11-119, **22.86g/t gold over 1.55m** (0.667oz/ton over 5.08ft)

The **Trecesson Gold Property Project** in the **Amos-Val d'Or Mining Camp** consists of **7,500 hectares** (18,533 acres, 75 square kilometres). It covers approximately **80%** of the **Trecesson Pluton** which has **geological similarities** to the **Bourlamaque Batholith** host to at least **9 known deposits** in the **Val d'Or mining camp** that gave rise to **producers** and **past producers** including the **Ferderber, Sullivan and Richmonts Beaufor gold mines**.

The **Trecesson Gold Property** is **30 %** underlain by **felsic to mafic volcanics** with **potential** for **volcanogenic massive sulfides-base metal mineralization** and **70%** by **granitic intrusive rock** (The Trecesson Pluton) with **significant fracturing** of **substantial extent**. These "fractures" structures appear to be **conduits for metallic mineralizing fluids, gold, silver, copper, lead, zinc and Tungsten**.

Currently:

The **mapping/prospecting** and **sampling** is of **targeted areas** is **ongoing**.

Gordon N. Henriksen, P.Geo., Vice President of Knick Exploration, is the Company's qualified person as defined by National Instrument 43-101. He has reviewed and approved the contents of this press release.

We seek Safe Harbour.
